EDUCATION

Texas A&M University

College Station, TX | Graduating May 2027

- B.S. Computer Science, minor in Mathematics; GPA 3.826
- Relevant Coursework: Data Structures & Algorithms, Database Systems, Cloud Computing, Software Engineering

PROJECTS

Market Regime Detection & Auto-Model Switching <https://github.com/jmcclary27/Market-Regime-Detection-With-Auto-Model-Switching>

- Built a VM-hosted MLOps pipeline orchestrated with Airflow for market data polling and model switching.
- Created Hidden Markov Models, shadow inference, and rollback logic using Docker, Airflow DAGs, and Git Actions.
- Developed reproducible ML workflows with data versioning and experiment tracking via DVC, MLflow, and Git.
- Used CI/CD methods to automate testing, container builds, and pipeline validation with GitHub Actions.

Contract Clause Identifier with Semantic Search <https://github.com/jmcclary27/ACC-MLOps-Project>

- Finetuned a model to extract and assign contract clauses to uploaded documents.
- Used MLFlow, S3, and DVC to create pipelines for training and CI/CD.
- Implemented React to create the frontend and APIs for data transfer.
- Trained a RAG model for semantic search and querying on the contract clauses.

Panda Express Manager System <https://project3-group4.onrender.com/>

- Led a group to create a managerial and customer app for Panda Express using the Agile development methodology.
- Created the full stack app using React, SpringBoot, Docker, AWS, PostgreSQL, Python, and React APIs.

EXPERIENCE

Thrivent

Remote

Software Engineer

May 2026 - August 2026

- I will be implementing DevOps strategies to automate updates, testing, and ensuring high quality code and data.

Sasori Zero

College Station, TX

AI Engineer

December 2025 – Present

- Applying large language models to power developer tools, automate workflows, and build decision systems.
- Integrated frontend user interface and packaged it as a desktop app using Electron.

Advanced Vision and Learning Lab

College Station, TX

Research Assistant

October 2024 – April 2025

- Used PyTorch Lightning to create and train U-net audio diffusion models for dataset augmentation.
- Utilized High Performance Research Computing to submit and monitor jobs.
- Used feature engineering with fourier transforms to optimize the generated results.

LEADERSHIP AND ACTIVITIES

Aggie Coding Club Project Manager

College Station, TX

Member

January 2026 - Present

- Led a group of 19 engineers through agile development to create the contract clause identifier listed above.
- Created GitHub project boards and hosted frequent sprint meetings to ensure success of the team.

Freshman Leaders in Education and Human Development

College Station, TX

Service Committee Leader and Freshman Counselor

September 2023 – April 2025

- Led a group of 90 people to donate over 3000 dollars to The Miracle Foundation through organizing several fundraisers.

TECHNICAL SKILLS

- **Languages** – Python, C++, Java, JavaScript, Bash
- **Frameworks** – Django, MongoDB, PyTorch, Docker, DVC, Airflow, Postgres, GitHub, AWS, Google Cloud, React
